

CISA RELEASES UPDATED GUIDANCE FOR SECURITY AROUND HOLIDAYS

The Cybersecurity and Infrastructure Security Agency (CISA) is warning bricks-and-mortar retailers and venue operators to be vigilant about the threat of violence this holiday season.

“Given the increase of patrons during the holidays, individuals or groups intending to inflict harm or disrupt festivities may also leverage the corresponding shopping season as an opportunity to engage in grievance-based violence. Although there are currently no credible or imminent threats, shopping venues should assess existing...

Megatrends Report Finds Artificial Intelligence, Cybersecurity and Supply Chain Assurance are Top Security Concerns

Artificial Intelligence (AI) is the predominant trend shaping the security industry according to the Security Industry Association’s (SIA) 2022 Security Megatrends report—an annual survey that aims to define the top 10 factors influencing both short- and long-term change in the global security industry

For the second year in a row, the 2022 SIA Megatrends report identified AI as the leading influence “as companies have embraced the technology’s promise through advanced audio analytics, complex facial recognition, cutting-edge video surveillance scene processing...

Security Leader Spotlight: NVT Phybridge's Arvind David

Each month in this space, ISC News Editor-in-Chief D.J. Murphy will sit down with a leader in the security space who will share their thoughts and expertise on issues affecting a variety of industry stakeholders. This month we feature Arvind David, vice president of digital experience at NVT Phybridge. Well known as a leader in long reach Power over Ethernet (PoE) technology, NVT Phybridge has a growing business enabling the connection of IP endpoints. David discusses how the past two years have impacted digital transformation, the difference between the “digital haves” and “digital have-nots,” and the advantage...

Why Monitoring Security Storage Hardware Provides A Better Customer Experience

Every day, massive amounts of surveillance video are placed onto storage devices with the expectation that, at some point, some undetermined segment of video will need to be retrieved and viewed. Be it for forensic, audit or other purposes, the storage system must be capable of delivering the required footage reliably. The fact is that key components within systems are vulnerable to failure. The challenge is providing information/data that helps you look for the signs easily and respond proactively to mitigate the risk of system issues and protect the integrity of the video. Click below to download this featured white paper, or [learn more here](#).
