

SURVEY: AMERICANS DESIRE SAFETY MEASURES TO PREVENT GUN VIOLENCE

Americans are concerned about gun violence and mass shootings, and they are willing to modify their daily activities in the name of safety, according to a new survey.

Weapons detection company Evolv Technology surveyed 2,000 Americans to discover who is most concerned about gun violence and how it has altered their daily routines. Among the findings, nearly 8 out of 10 (77.8 percent) Americans think gun violence is a problem in America. Nearly one third (29 percent) have been in a location where someone unexpectedly opened fire and 28 percent feel they are likely to encounter an active shooter in their lifetime.

The survey also uncovered attitudes about what extra security steps Americans are willing...

Officials Warn of Potential Drone Attack on Electric Grid

U.S. officials say a small drone discovered near a substation in Pennsylvania last year was likely intended to be part of an attempted attack on the electrical grid. Officials think it is the first time this kind of attack attempt has taken place.

An intelligence bulletin, obtained by ABC News, contains information about a plot to use a drone to disrupt part of the electrical grid in Pennsylvania in July 2020.

The drone had copper wire under it and was likely intended to disrupt operations by creating a short circuit to damage transformers, according...

ACT365 Gives You Access from Anywhere, Anytime and on Any Device

Sponsored By: Vanderbilt

Vanderbilt's ACT365 delivers seamless integration between access control and video management accessible from anywhere, at any time and on any device. Quickly update or remove user permissions, view cameras or open a door from a PC, tablet or smartphone. ACT365 is a scalable cloud-based solution designed to allow remote management of single or multiple locations, all from an easy-to-use interface. Learn how ACT365 enables you to stay connected to your business wherever you are.

When Cyber and Mobile Merge - A New Physical Security Frontier

SPONSORED BY:

Tuesday, Decemebr 14, 2021

1:00 PM ET

Join RS2 Technologies on Tuesday, December 14th, as we dive into mobile and cyber advancements that have changed the physical security industry for the better. We will show you how to take access control to the next level with contactless access, smart biometrics, flexible workflow automation, and cyber secure physical access.

One that is increasingly leveraging new technologies around mobile, cyber, and cloud-based solutions. People expect technology to provide them with greater convenience – and now, enhanced security. The mobile revolution has become a vital part of security today and access control. Entirely new mobile credential ecosystems that rely on smartphones are replacing the need to carry traditional plastic access cards. And more business operations are relying on cyber and cloud-based solutions to function in a perimeter-less world.

How Security Adds Value to Your Business: Leveraging Access Control Data in a Post-COVID Environment

The Covid-19 pandemic has completely changed how businesses leverage their buildings and employees. In an environment that now demands greater flexibility than ever, executives need as much information as possible to inform their decisions. Access control data can provide insight as they assess their staffing, occupancy, health and even energy needs. Analyzing historical and current trends residing in this data can lead to better decisions for organizations in many operational areas.
