

More Than Half of Medical IoT Devices Contain Vulnerabilities; ISC West to Highlight Security Concerns of Convergence

A new report finds medical devices connected to the internet are rife with vulnerabilities and security issues, highlighting a growing challenge for security departments as cyber and physical security continue to converge.

In its 2022 State of Healthcare IoT Device Security Report, Cynerio finds 53 percent of connected medical devices and other IoT devices in hospitals have a known critical vulnerability. The data also reveals a third of bedside healthcare IoT devices – which patients most depend on for optimal health outcomes – have an identified critical risk.

ISC West, coming up next month in Las Vegas, will feature many exhibitors with solutions to address this growing...

Welcome to Dispatch—a new section of ISC News that will deliver the most up-to-date information throughout the year about our in-person flagship events: ISC West and ISC East. This inaugural edition of Dispatch focuses on the upcoming ISC West, taking place March 22-25 at the Venetian Expo in Las Vegas.

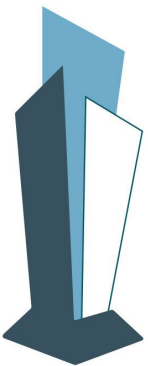

ISC West returns to its traditional March dates this year and introduces several new features representing a first step towards a re-imagined ISC experience.

This year [ISC West](#) will debut [THE BRIDGE](#), powered by Intel, as a new platform for thought leadership, new product immersion, networking and business insights at the center of the show floor. Full-day programming at The Bridge will be open to all who attend...
